

## SolovatsSoft Mobile Enterprise Wireless and Management Solutions

### Mobile and wireless devices improve productivity, but at what cost if compromised?

Gartner states that mobile email and personal information management (PIM) has already penetrated 65% of organizations. By the year 2005, 40% of corporate data will reside on handheld devices. Driven by user demand, mobile computing has accelerated faster than IT departments can create and implement plans to secure and manage mobile users, data and devices.

SolovatsSoft wireless team was created for departments/specific initiatives within large organizations or small-to-midsize enterprises that have limited IT resources, but need to minimize risk of development wireless solutions that are not core business. In addition, you can be assured that SOLOVATSOFT solutions will continue to meet your enterprise and management requirements as you expand the use of mobile and wireless computing throughout your organization.
